

TRUST STRESSLINE FOR SMARTER SPECIFICATION

For 50 years architects have trusted Stressline to provide high quality structural building products that meet their specification criteria and enhance their designs. We manufacture in the UK and our range includes both products that underpin the structural integrity of your projects and cast stone details that enhance their aesthetics.

We guarantee excellence throughout the delivery chain, ensuring that you can trust our service driven approach to meet all your needs; from working with you on your technical requirements and calculations to helping to keep your projects on track with efficient, co-ordinated deliveries.

CAST STONE BEAUTY THAT LASTS

Cast stone is a recent addition to the Stressline product range and one that compliments our other structural elements. We apply the same high standards and emphasis on quality to our cast stone units as we do to all our structural building product ranges. One of the few UK companies that supplies vapour-cured cast stone, a process that not only dramatically cuts manufacturing times, but also improves the durability and service life of the product, will enhance your schemes and buildings for many years to come.

MEETING YOUR SPECIFICATION

Our emphasis on quality and ability to meet strict cast stone specification has led to several supply relationships with major house builders across the UK. These companies use Stressline's cast stone products for various projects nationwide, for example our ability to manufacture large scale cast stone pier caps, created a stunning feature to the entrance of a recent major London development.

LINTELS FOR ALL REQUIREMENTS

Stressline's comprehensive range of structural building products means that you can rationalise suppliers in line with BIM objectives and be certain of the same high quality standards whatever your needs.

Our Fair Faced pre-stressed concrete lintels, for example, offer a cost-effective, high performance option for any fair-faced brick/block wall requirements. Available in a wide range of sizes and suitable for pointing if required, our extensive range offers the ideal solution for a variety of load requirements including masonry, concrete floors, attic trusses and uniformly distributed timber floors and roofs.

For extreme load conditions, our Rolled Steel (RS) and Rolled Steel Channel (RSC) lintels offer the ideal choice to suit a variety of cavity wall constructions. Available up to a maximum length of 6.6m, they are manufactured red oxidised as standard or can be supplied with a galvanised finish if required.

The images above show just three lintel types from our wide range, which includes: cavity wall, closed eaves, timber frame, solid wall and pre-stressed concrete lintels. For full details contact us for your free Lintel Guide.

WHY CHOOSE STRESSLINE?

- **Single, trusted supplier for all your structural support and cast stone requirements**
- **Complete accountability with in-house manufacturing and technical support**
- **50-year track record and respected reputation**
- **Service-driven approach and in-house expertise**
- **Quality, high performance products that last**
- **Co-ordinated deliveries and opportunity to rationalise suppliers in line with BIM objectives**
